

WEEK 9

Aim:

To develop a user-friendly Student Registration Portal for a real-world scenario using React and JSX, containing a registration form to collect student details.

Description:

The Student Registration Portal is a React-based web application developed using JSX (JavaScript XML). It provides a simple and userfriendly interface for registering students in a college.

The registration form collects important student details such as full name, email, phone number, date of birth, gender, course, and password. React's useState Hook is used to store and manage the entered information. The onChange event updates the form data whenever the user enters or changes a value.

When the user clicks the Register button, the form is submitted using the onSubmit event. Basic validation is performed using the required attribute. After successful submission, a "Registration Successful!" message is displayed using conditional rendering.

CSS is used to provide a clean layout, proper spacing, colors, input styling, and a user-friendly appearance. Thus, the application demonstrates how React and JSX can be used to develop an interactive real-world registration interface.

Program Code :

App.jsx:

```
import { useState } from "react"; import
"./App.css";

function App() {  const [formData,
setFormData] = useState({  name: "",
```

```
email: "", phone: "", dob: "", gender:
"", course: "", password: "",
});
```

```
const [submitted, setSubmitted] = useState(false);
```

```
const handleChange = (e) => {
setFormData({
  ...formData,
  [e.target.name]: e.target.value,
});
};
```

```
const handleSubmit = (e) => {
  e.preventDefault();
setSubmitted(true);
};
```

```
return (
  <div className="container">
    <div className="form-box">

      <h1>Student Registration</h1>
      <p className="subtitle">
        College Student Registration Portal
      </p>
```

```
<form onSubmit={handleSubmit}>
```

```
  <label>Full Name</label>
```

```
    <input      type="text"
name="name"      placeholder="Enter
your full name"
value={formData.name}
onChange={handleChange}
    required
  />
```

```
  <label>Email</label>
```

```
    <input      type="email"
name="email"
placeholder="Enter your email"
value={formData.email}
onChange={handleChange}
    required
  />
```

```
  <label>Phone Number</label>
```

```
    <input      type="tel"
name="phone"      placeholder="Enter
phone number"
value={formData.phone}
onChange={handleChange}
    required
```

/>

<label>Date of Birth</label>

<input type="date"

name="dob"

value={formData.dob}

onChange={handleChange}

required

/>

<label>Gender</label>

<div className="gender">

<label>

<input

type="radio"

Register

Registration Successful!

Result: Thus, a **Student Registration Portal UI** was successfully developed using **React and JSX**. The registration form accepts student details such as name, email, phone number, date of birth, gender, course, and password, and displays a **Registration Successful** message after submission.
